

# IT Policy

Rules for company computers, accounts, software, networks and technology services.

Internal Company Document | Version 1.0 | Effective: 1 September 2026

## 1. Acceptable Use

- Company IT resources are provided primarily for business purposes.
- Limited personal use may be permitted when it does not interfere with work, create security risks or breach company policy.
- Users must not use company systems for illegal activity, unauthorised access, harassment or distribution of malicious software.

## 2. Passwords and Authentication

- Passwords must be unique and must not be shared with colleagues.
- Multi-factor authentication (MFA) must be enabled for supported company applications.
- If an employee suspects that credentials have been exposed, they must report the incident to IT immediately and change the affected password.

## 3. Company Devices

- Company laptops must use approved operating systems, endpoint protection and security configuration.
- Employees must not disable security controls or install unapproved software without IT approval.
- Lost or stolen devices must be reported to IT as soon as possible.

## 4. Software Installation

- Software required for business use should be installed through approved company processes.
- Employees must not install cracked, pirated or unlicensed software.
- Browser extensions and utilities that access company data require appropriate approval.

## 5. Email and Messaging

- Employees must verify unexpected attachments, links, payment requests and credential requests.
- Sensitive information should only be sent through approved communication channels.
- Suspected phishing messages should be reported to IT/security rather than forwarded to other employees.

## 6. Network and Remote Access

- Remote employees must use approved VPN or secure access methods when required.
- Public or shared computers must not be used to access sensitive company systems.

- Employees should avoid connecting company devices to untrusted networks where a safer alternative is available.

## **7. Backup and Data Storage**

- Business data must be stored in approved company locations so that it can be protected and recovered.
- Employees should not rely on local laptop storage as the only copy of important business information.
- Backup operations for company servers and critical systems are managed by authorised IT personnel.

## **8. IT Support**

- For technical issues, employees should use the company IT support channel and provide the device name, issue description, error message and business impact.
- Critical incidents affecting multiple users or important business services should be escalated immediately.
